

Education

Year	Qualification	Institute
2015–19	Bachelor of Technology in Computer Science and Engineering	Indian Institute of Technology Guwahati (IITG)

Work Experience

- **Software Development Engineer 2** | *Amazon, London*

Apr 2022–Present

 - Led the architecture and migration of **300K+ trailers** to Playback 2.0, unifying trailer architecture with other content types.
 - Designed and built a new API with dual-path entitlement processing, enabling seamless handling of DRM-enabled and DRM-free trailers, improving caching and consistency, and allowing customers to watch trailers without signing in.
 - Architected and launched an extensible customer colour-variant playback capability worldwide, propagating customer preferences safely across 6+ microservices and multiple downstream schemas.
 - Built a highly available API (**99.95% SLA, p99.9 latency of 50 ms**) that delivers personalised playback features at scale, handling peak traffic of 500K requests per second.
 - Led the end-to-end launch of a new subscription plan in India as the sole point of contact, enforcing device limits across **50M+ devices** monthly and supporting revenue growth by preventing unauthorised account sharing.
 - Implemented playback ranking for Playback 2.0, collaborating with **100+ stakeholders across 15+ teams** to overcome technical constraints and unlock a critical feature that improved customer experience.
 - **Onboarded and mentored a new engineer**, accelerating their ramp-up and enabling independent contributions within one month.
 - Owned end-to-end execution of business-critical API migrations and schema-deprecation campaigns, influencing 40+ client teams across 10+ repositories to eliminate legacy maintenance overhead and achieve **\$500K in annual savings** through domain decoupling.
 - Led a backend optimisation initiative, doubling service throughput from 600 to 1200 TPS and reducing annual cloud infrastructure costs by **\$245K**.
- **Software Development Engineer** | *Carousell Group, Singapore*

Oct 2021–Mar 2022

 - **Delivered a new feature** for the team vertical, translating product requirements into a solution that allows millions of customers across Southeast Asia to seamlessly buy and sell cars and property.
- **Software Engineer – Full Stack** | *Works Applications, Singapore*

Oct 2019–Oct 2021

 - Led the full software development lifecycle for Supply Chain Management ERP products, from requirements analysis to deployment and maintenance, while collaborating with international teams in Japan, India, and China.
 - Significantly improved performance by refactoring a legacy JavaScript web application to Angular, **reducing page-load time from 35 seconds to 5 seconds**.
 - Diagnosed and fixed critical production issues within existing RESTful APIs, successfully resolving Out of Memory (OOM) errors across various sub-products.
 - Mentored an intern in designing and developing an internal RESTful API to track real-time batch-job status.

Technical Skills

- **Programming Languages:** Java, Kotlin, C/C++, TypeScript, Python
- **Cloud & DevOps:** AWS (EC2, ECS, S3, Lambda, ElastiCache), Kubernetes, Docker, Microservices, Jenkins CI
- **Databases:** SQL, MySQL, Cassandra
- **Libraries/Frameworks:** Angular, Spring Framework, JUnit, Mockito
- **Tools & Methodologies:** Git, Jira, Agile, Scrum
- **Operating Systems:** Linux, macOS

Achievements

- Received the organisation-wide **Customer Obsession Award** in 2024 for consistently exceeding expectations and demonstrating an unwavering commitment to customer satisfaction.
- Ranked in the **top 1%** of 150,000 students in IIT-JEE Advanced and the **top 0.1%** of 1.4 million candidates in JEE Mains, 2015.

Positions of Responsibility

- **Core Team Member, Techniche (Technical Festival of IIT Guwahati)**
 - Organised events such as the Lecture Series and a coding competition.
 - Volunteered at the Guwahati Half Marathon, organised by Techniche, with 15K+ participants.
