London, UK | +44 7776827851 | Kejriwal9576@gmail.com | [linkedin.com/in/sauravk9](https://www.linkedin.com/in/sauravk9)

Senior Backend / Distributed Systems Engineer with nearly 7 years of experience, including 4+ years at Amazon designing and operating high-scale distributed systems (500K req/s peak, 99.95% SLA). Led platform migrations and cross-team initiatives spanning 40+ teams, delivering \$745K+ in annual infrastructure savings while building highly available, customer-facing systems.

WORK EXPERIENCE

Software Development Engineer 2 | Amazon, London *Apr 2022 – Present*

- Set technical direction for the migration of 300K+ trailers to Playback 2.0, architecting a dual-path approach for DRM-enabled and DRM-free content and leading weekly design reviews across internal and partner teams; unified trailer architecture with other content types and established API design standards adopted across multiple teams.
- Designed and built a highly available API (99.95% SLA, p99.9 latency of 50ms) delivering personalised playback features at peak traffic of 500K requests/second.
- Redesigned parental-control validation to run at content-page load rather than at playback time, removing it from the Time-To-First-Frame critical path; standardised fail-open behaviour across 6 client platforms globally handling 300K+ TPS and strengthened playback resiliency guarantees.
- Architected and launched an extensible customer colour-variant playback capability worldwide, safely propagating preferences across 6+ microservices and multiple downstream schemas; drove 172M sessions from 98M customers within the first week.
- Served as the go-to subject-matter expert for Playback 2.0 migrations and trailer systems; identified and raised a policy-engine risk that reshaped Android, iOS, and Web team roadmaps, accelerating their offboarding from a legacy API.
- Led API-deprecation and backend-optimisation initiatives across 40+ client teams and 10+ repositories, doubling service throughput (600 → 1200 TPS) and delivering \$745K in combined annual savings.
- Served as sole point of contact for launching a new subscription plan in India, enforcing device limits across 50M+ devices monthly to protect revenue from unauthorised account sharing.
- Mentored a newly onboarded engineer on system design and codebase practices, accelerating ramp-up and enabling independent, production-level contributions within one month.

Software Development Engineer | Carousell Group, Singapore *Oct 2021 – Mar 2022*

- Built a customer-facing feature for browsing Cars & Property listings on the Carousell marketplace; launched initially in the Philippines as the pilot market ahead of regional Southeast Asia rollout.

Software Engineer – Full Stack | Works Applications, Singapore *Oct 2019 – Oct 2021*

- Owned full SDLC for Supply Chain Management ERP products, from requirements analysis through deployment and maintenance, collaborating with teams across Japan, India, and China.
- Refactored a legacy JavaScript web application to Angular, cutting page-load time from 35 seconds to 5 seconds (86% improvement).
- Diagnosed and resolved critical out-of-Memory (OOM) production errors across multiple RESTful sub-products using heap dump analysis, improving system stability.

TECHNICAL SKILLS

- Languages: Java, Kotlin, TypeScript, Python, C/C++
- Distributed Systems & Cloud: Microservices, AWS (EC2, ECS, Lambda, S3, ElastiCache, SQS, SNS, DynamoDB), Kubernetes, Docker, Jenkins CI
- Databases: SQL, MySQL, Cassandra
- Frameworks & Testing: Spring Framework, JUnit, Mockito

EDUCATION

B.Tech in Computer Science and Engineering — Indian Institute of Technology Guwahati (IITG) *2015 – 2019*

ACHIEVEMENTS

- Received Amazon's organisation-wide Customer Obsession Award (2024) for consistently exceeding customer expectations.
- Ranked top 1% of 150,000 students in IIT-JEE Advanced and top 0.1% of 1.4 million candidates in JEE Mains (2015).
